

## Sunet Drive – a safe and flexible storage for research data

**Sunet Drive was introduced at Karlstad University in 2021 to facilitate processing, storage and sharing of research data. Sunet Drive is a safe, practical and flexible national solution.**

- It is **secure** - no risk of data being lost. The processing of sensitive personal data becomes more secure through multi-factor login.
- It is **practical** - provides structure for research data and documents that are relevant in a research project. You can also co-write with your colleagues in the Microsoft programmes Word, Excel and PowerPoint
- It is **flexible** - makes it easier to share data and information with partners.

All researchers can order storage space in Sunet Drive and receive support on how to use it. This applies to both new, existing and projects that have ended, regardless of the form of financing.

### Background

Sunet Drive is a national solution provided by Sunet (Swedish University Computer Network). Every Swedish university and university college is connected to Sunet. Sunet is tasked with meeting the computer networking need of Swedish higher education institutions and other public organisations connected to research or higher education. Sunet Drive complies with applicable laws such as the GDPR and case law such as Schrems II.
